Chapter 1: Important Safety Instructions

1.1 Safety Instructions

Installation Warnings

- Before installation and usage, please read this *User Manual* thoroughly. This helps you to use the product correctly and safely.

- Install the UPS in a well-ventilated area, away from excess moisture, heat, dust, flammable gas or explosives.

- To avoid fire accidents and electric shock, please install the UPS in a temperature and humidity well-controlled indoor area free of conductive contaminants. For the temperature and humidity specifications, please refer to *Appendix 1: Technical Specifications*.

- Leave adequate space (at least 15cm) around all sides of the UPS for proper ventilation.

Connection Warnings

- The UPS must be well grounded due to a possible risk of current leakage.

- The installation of upstream and downstream protective devices is highly recommended when the UPS is connected to the mains and the loads.

- The protective devices connecting to the UPS must be installed near the UPS and must be easily accessible for operation.

- Do not use extension cords to connect the UPS to an AC outlet.

- Do not plug the UPS’s input power cord (provided) into its own output sockets.

- If you need to move the UPS or perform re-wiring, please turn off the AC input power and ensure that the UPS has been safely shutdown. Otherwise, the output end might still be energized, which might cause electric shock.

- The UPS output cable should be shorter than 10m.
Usage Warnings

- This is a class-A product. In a domestic environment, this product may cause radio interference, in which case, the user is required to take adequate measures.

- The UPS can be used to power computers and associated peripheral devices, such as monitors, modems, cartridge tape drives, external hard drives, etc.

- It is strictly forbidden to connect the UPS with:
  1. any regenerative-type loads.
  2. any asymmetrical loads (ex. half-wave rectifier).

- To ensure reliable operation of the UPS and to protect the UPS from overheating, the slits and openings in the UPS must not be blocked or covered.

- Before usage, you must allow the UPS to adjust to room temperature for at least one hour to avoid moisture condensing inside the UPS.

- Do not pour and splash any liquid on the UPS. Do not insert any object into the UPS’s slits and openings. Do not put beverage containers on or around the UPS.

- When an emergency occurs, press the OFF button (OFF) and release it after you hear one beep to turn off the UPS. Cut off the input power to completely shut down the UPS.

- Do not use any cleaning liquid or cleaning spray to clean the UPS. Before cleaning, please make sure that the UPS has been completely shut down, the UPS’s input power cord has been unplugged, and the built-in batteries have been disconnected.

- All maintenance services must be performed by qualified service personnel. Forbid opening or removing the cover of the UPS yourself to avoid high voltage electric shock.

- You must contact qualified service personnel if either of the following events occur:
  1. Liquid is poured or splashed on the UPS.
  2. The UPS does not run normally after this User Manual is carefully observed.

**NOTE:**

If you use the UPS in an area that generates or incurs dust, you should install a dust filter in the UPS to ensure normal product life and function.

- Keep the batteries away from heat sources. Do not open or mutilate the batteries. The released electrolyte is harmful to the skin and eyes and may be toxic.

- A battery can present a risk of electric shock and high short-circuit current.

- Servicing of batteries must be performed or supervised by qualified service personnel knowledgeable in batteries and the required precautions. Keep unauthorized personnel away from batteries.

- The risk of electric shock and short-circuit current is possible when the batteries are connected to the UPS. Before maintenance, disconnect all batteries to cut off the battery power.

- For battery replacement, only use the same number and type of batteries.

- Observe the following before replacing the batteries:

  1. Remove watches, rings, or other metal objects.
  2. Use tools with insulated handles.
3. Wear rubber gloves and boots.
4. Do not lay tools or metal parts on the top of batteries.
5. Before battery removal, replacement or installation, disconnect any circuit connected to the batteries.

- Do not connect the batteries in reverse; otherwise, a risk of electric shock or fire accidents might occur.

**WARNING:**
The risk of electric shock and short-circuit current is possible when the batteries are still connected to the UPS even though the UPS is disconnected from the mains. Do not forget to cut off the battery source before maintenance.

### 1.2 Storage

- **Prior to installation**
  
  If the UPS needs to be stored prior to installation, it should be placed in a dry area. The allowable storage temperature is between -15°C and +50°C (5°F~122°F).

- **After usage**
  
  Press the **off** button, make sure the UPS is shutdown, disconnect the UPS from the utility power, remove all equipment from the UPS, and store the UPS in a dry and well-ventilated area at a temperature between -15°C and +50°C (5°F~122°F). Idle batteries must be recharged fully approximately every three months if the UPS needs to be stored for an extended period of time. The charging time must not be less than 24 hours each time.

**NOTE:**

After storage and before start-up of the UPS, you must allow the UPS to adjust to room temperature (20°C~25°C or 68°F~77°F) for at least one hour to avoid moisture condensing inside the UPS.
Chapter 2: Introduction

2.1 General Overview

The N series UPS is a single-phase on-line UPS providing reliable and consistent sine-wave quality power to your electronic equipment. It adopts the latest technology and the highest quality components providing output power factor up to 0.9 and its efficiency in on-line mode can reach at maximum 93%. The UPS not only provides safe, reliable and uninterrupted power to your sensitive electronic equipment at all times, but also produces greater electronic power efficiency at less cost. Its compact design does not occupy much space and is easy to use. There are three different ratings (1kVA, 2kVA and 3kVA) for your selection.

2.2 Exterior & Dimensions

(Figure 2-1 : 1 kVA Exterior & Dimensions)  
(Figure 2-2 : 2/3 kVA Exterior & Dimensions)
2.3 Package List

**NOTE:**
1. If there is any damage or anything missing, please immediately contact the dealer from whom you purchased the unit.
2. If the UPS needs to be returned, carefully repack the UPS and all of the accessories using the original packing material that came with the unit.

- **Standard Model:** UPS102N2000N1B0 (1kVA)/ UPS202N2000N1B0 (2kVA)/ UPS302N2000N1B0 (3kVA):

</table>
| 1   | ![Green LED](image) | Indicates the output status.  
1. ON (green): There is output  
2. OFF: There is no output |
| 2   | ![Red LED](image) | 1. ON (red): The UPS detects an internal fault or an environmental fault. You could refer to 3.3 LCD Display - No. 9 for more information.  
2. Flashing (red): The UPS has the following warning message(s).  
   a. ![Battery Icon](image): There is no battery or battery replacement is needed.  
   b. ![Overload Icon](image): The UPS is overloaded.  
   c. ![Charging Voltage Icon](image): Charging voltage is too high or too low. |
### 3.2 Multi-function Buttons

<table>
<thead>
<tr>
<th>No.</th>
<th>Multi-function Button</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1   | ![Button](image)      | The button has multi-function. Please refer to the following for detailed information.  
1. **Turn-on:**  
   - In standby/bypass mode, press and hold the button for 3 seconds, release it after you hear one beep and the UPS will run in on-line mode.  
   - Cold start: When there is no AC input, press and hold the button for 3 seconds, release it after you hear one beep and the UPS will start up in battery mode.  
2. **Battery test:**  
   A battery test can only be executed in on-line mode.  
   - For manual battery test, please press and hold the button for 3 seconds, release it after you hear one beep, and the UPS will transfer to run in battery mode and perform a 10-second battery test.  
     If the test result is ok, the LCD will show ‘PAS’ and the UPS will return to on-line mode.  
     If the test result is abnormal, the LCD will show ‘FAL’, the LED will flash, the warning icon and no-battery/battery replacement icon will illuminate, and the UPS will return to on-line mode.  
3. **Buzzer off:**  
   When the buzzer is on, press the button for 0.1 second to turn the buzzer off. Please note that the buzzer will automatically turn on when a new alarm occurs. The buzzer can’t be manually turned on after it has been muted.  
4. **Confirmation:**  
   In setup mode, press the button for 0.1 second to confirm your parameter setup. |
<table>
<thead>
<tr>
<th>No.</th>
<th>Multi-function Button</th>
<th>Description</th>
</tr>
</thead>
</table>
| 2   | Off                   | The button has multi-function. Please refer to the following for detailed information.  
1. **Turn-off:**  
   - In on-line mode, press and hold the button for 3 seconds, release it after you hear one beep and the inverter will be off and the UPS will transfer to run in standby/bypass mode.  
   - The UPS will keep charging the batteries when the UPS is in standby/bypass mode even though the button has been pressed. To fully turn off the UPS, it is advised to unplug the input power cord.  
   - In battery mode, press and hold the button for 3 seconds, release it after you hear one beep and the UPS will turn off its output.  
2. **Fault clear:**  
   When the UPS has a fault condition, press and hold the button for 3 seconds, release it after you hear one beep and the UPS will clear the fault condition and return to standby/bypass mode. Besides, the LCD will show the relevant error code. For error code information, please refer to 3.3 LCD Display - No. 9.  
3. **Scrolling down:**  
   In setup mode, press the button for 0.1 second to go to the next display. |  |
| 3   | Setup                 | The button has multi-function. Please refer to the following for detailed information.  
1. **Scrolling down:**  
   In non-setup mode, press the button for 0.1 second to go to the next display.  
2. **Entering into the setup mode:**  
   Press the button for 3 seconds and the UPS will enter into the setup mode. For more information, please refer to 5.5 Setup Mode. Please note that only qualified service personnel can perform setup action. |  |

NOTE:  
When the backlight of the LCD is off, you can press any button mentioned above to wake up the display and enable each button function.

Chapter 5: Operation Modes

NOTE:
1. Please refer to Chapter 3: Operation Panel to learn how to operate the operation panel and understand the display meaning.
2. Each of the display diagrams shown in this chapter is for reference only. Actual display depends on the operation of the UPS.

5.1 Standby Mode
After the UPS is connected to the AC utility, it will supply power to the UPS and the batteries will be charged. The default setting of the UPS is set in ‘STANDBY mode’.

5.2 On-line Mode
In online mode, the connected loads are supplied by the inverter, which derives its power from the utility AC power, and the UPS charges the batteries and provides power protection to its connected loads.

5.3 Bypass Mode
In bypass mode, the critical loads are directly supplied by the utility power and the batteries are charged.

5.4 Battery Mode
When the UPS is operating during a power outage, the batteries provide DC power, which maintains inverter operation to support the connected critical loads.

You can install the Virtual COM Port Driver and the UPSentry 2012 software (please download from http://www.deltapowersolutions.com/en-in/mcis/software-center.php) or configure the SNMP card (optional) or MODBUS card (optional) to monitor and estimate the battery remaining capacity before or during an AC power failure. For more information about the SNMP card (optional) or MODBUS card (optional), please refer to its user manual.

NOTE:
You can only enable ‘SHUTDOWN AFTER’ function in battery mode. For information about ‘SHUTDOWN AFTER’ function, please contact service personnel.
5.5 Setup Mode

Press the scrolling button \( \text{setup} \) for more than 3 seconds and the LCD will go into the setup menu.

Please note that only qualified service personnel can perform setup action. In setup mode, you can set up the following items:

1. Inverter voltage
2. Inverter frequency
3. Bypass range
4. Buzzer disable
5. Overload alarm

For setup procedures, please refer to the following:

1. Press the \( \text{setup} \) button for more than 3 seconds to enter into the setup mode.
2. Press the \( \text{on} \) button for 0.1 second to change the parameter.
3. Press the \( \text{on} \) button for 0.1 second to confirm your parameter.
4. Press the \( \text{off} \) button for 0.1 second to go to the next setup item.
5. You can skip to the next setup item by pressing the \( \text{off} \) button for 0.1 second.
6. In setup mode, press the \( \text{setup} \) button for more than 3 seconds, the LCD will go back to the original display.
7. In setup mode, if you don’t press any button for more than 2 minutes, the LCD will exit from the setup mode and go back to the original display automatically.

For some settings, they can’t be set in certain operation modes. Please refer to the table below for relevant information.

NOTE:
Please refer to Chapter 3: Operation Panel to learn how to operate the operation panel and understand the display meaning.

WARNING:
Before performing turn-on procedures:
1. Please check the ‘+’ and ‘-’ poles and ensure that battery wring is correct (only for long backup model).
2. Please connect the external battery pack(s) with the UPS (only for long backup model).

6.1 Turn-on Procedures

6.1.1 Normal Start-up
1. Verify if the UPS’s input cord meets with N, L & G of the wall socket.
2. After the UPS is connected to the AC utility, the AC utility supplies power to the UPS. The UPS is initially set in ‘STANDBY mode’. To turn on the UPS, press and hold the button for 3 seconds and release it after you hear one beep.

NOTE:
After installation and before 1st start-up of the UPS, please ensure that the AC utility is normal (even though the UPS has the cold-start function).

6.1.2 Cold Start
Even when there is no utility power, you can still turn on the UPS. Just press and hold the button for 3 seconds, release it after you hear one beep, and the UPS will start up and run in battery mode.
6.2 Turn-off Procedures

NOTE:
Before performing turn-off procedures, verify that all of the loads connected to the UPS have been safely shutdown.

1. In on-line mode, if you want to turn off the UPS, press and hold the \texttt{off} button for 3 seconds and release it after you hear one beep. The inverter will turn off and the UPS will transfer to standby/ bypass mode.

   The UPS will keep charging the batteries when the UPS is in standby/ bypass mode even though the \texttt{off} button has been pressed. To fully turn off the UPS, it is advised to unplug the input power cord.

2. In battery mode, if you want to turn off the UPS, press and hold the \texttt{off} button for 3 seconds and release it after you hear one beep. The UPS will turn off its output. For long backup model, disconnecting the wiring between the UPS and the external battery pack(s) is suggested.
Chapter 7: Alarm

<table>
<thead>
<tr>
<th>No.</th>
<th>Condition</th>
<th>Alarm</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Battery Mode</td>
<td>The audible alarm beeps once every 2.1 seconds.</td>
</tr>
<tr>
<td>2</td>
<td>Low Battery</td>
<td>The audible alarm beeps once every 0.6 second.</td>
</tr>
<tr>
<td>3</td>
<td>Battery Missing/ Weak Battery/ Battery Replacement/ *</td>
<td>The audible alarm beeps once every 2.1 seconds.</td>
</tr>
</tbody>
</table>
| 4   | Overload                      | 1. Overload\_105\%~125\%: The audible alarm beeps once every 2.1 seconds.  
                            | 2. Overload\_125\%~150\%: The audible alarm beeps once every 0.6 seconds. |
| 5   | Fault                         | The audible alarm beeps continuously for 5 seconds when the UPS detects an internal fault. |

**NOTE:**

*: After reconnecting or replacing the batteries, it might take a while for the UPS to switch off the alarm automatically. If, after a period of time, the audible alarm still exists, the user must manually initiate a battery test (press and hold the \(\text{on} \) button for 3 seconds and release it after you hear one beep) to clear the alarm.
### Chapter 8: Optional Accessories

<table>
<thead>
<tr>
<th>No.</th>
<th>Item</th>
<th>Function</th>
</tr>

<td>Mini SNMP Card</td>
<td>Monitors and controls the status of the UPS via a network system.</td>
</tr>
<tr>
<td>3</td>
<td>Mini Relay I/O Card</td>
<td>Increases the quantity of dry contacts.</td>
</tr>
<tr>
<td>4</td>
<td>Mini MODBUS Card</td>
<td>Lets the UPS have MODBUS communication function.</td>
</tr>
<tr>
<td>5</td>
<td>Mini TVSS Card</td>
<td>Lets the UPS have surge protection function.</td>
</tr>
<tr>
<td>6</td>
<td>Charger Board-4A (only for Long Backup Model)</td>
<td>Additionally install the 4A charger board to increase the charge current to reach at maximum 8A.</td>
</tr>
</tbody>
</table>

**NOTE:**

1. For detailed installation and operation of any accessory mentioned above, please refer to the Quick Guide, User Guide, or Installation & Operation Guide included in the package of the relevant optional accessory.

2. If you want to buy any accessory mentioned above, please contact your local dealer or customer service.
Chapter 9 : Troubleshooting

1. When a problem occurs, please check if the following situation exists before contacting Delta service personnel:
   - Is the main input voltage present?

2. Please have the following information ready if you would like to contact the Delta service personnel:
   - Unit information including model, serial number, etc.
   - An exact description of the problem. The more detailed description of the problem, the better.

3. When you see the following problems occur, please follow the solutions shown below.

   **A. About the error codes shown on the 7-segment Display:**

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Meaning</th>
<th>Possible Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>E11</td>
<td>Charger Warning</td>
<td>Charging voltage is too high or too low.</td>
<td>Contact service personnel.</td>
</tr>
<tr>
<td>E13</td>
<td>Temperature Out of Range</td>
<td>The UPS temperature is out of range.</td>
<td>1. Check whether the UPS’s ventilation is normal.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>2. Decrease the loads.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>3. Check whether the fan(s) run(s) normally.</td>
</tr>
<tr>
<td></td>
<td></td>

<td>The UPS has abnormalities.</td>
<td>Contact service personnel.</td>
</tr>
</tbody>
</table>
| E21        | O/P Short | Output has a short-circuit issue. | 1. Check whether the output has a short-circuit issue.  
2. Contact service personnel. |
| E77        | Charger Fault | Charger is damaged. | Contact service personnel. |
| Sd1        | RPO Shutdown | Remote shutdown is executed from dry contact. | After the remote shutdown events are eliminated, follow the turn-on procedures to start up the UPS. |
| Sd4        | Battery Low Shutdown | The UPS transfers to run in battery mode due to AC utility abnormality; however, the battery power is almost used up. | 1. Check the main AC source and the input power cord’s status.  
2. Contact service personnel. |
### B. About other problems that might happen:

<table>
<thead>
<tr>
<th>No.</th>
<th>Problem</th>
<th>Possible Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Overload</td>
<td>The UPS is overloaded.</td>
<td>Decrease your connected loads.</td>
</tr>
</tbody>
</table>
| 2   | Battery Missing                  | Internal battery cables are not connected or not firmly connected. | 1. Contact service personnel.  
2. Connect the internal battery cables and connect them firmly. |
| 3   | Weak Battery/ Battery Replacement | Batteries are damaged or battery life time is due.  | Contact service personnel.                        |
| 4   | Abnormal Input (when the AC icon is flashing) | The AC input voltage or frequency is out of the acceptable bypass range. | 1. Check whether the AC input voltage or frequency is abnormal.  
2. Contact service personnel. |

**NOTE:**
If all possible causes are eliminated but the alarm still appears, please contact your local dealer or customer service.
Chapter 10: Maintenance

10.1 UPS

- **UPS Cleaning**

  Regularly clean the UPS, especially the slits and openings, to ensure that the air freely flows into the UPS to avoid overheating. If necessary, use an air-gun to clean the slits and openings to prevent any object from blocking or covering these areas.

- **UPS Regular Inspection**

  Regularly check the UPS every half year and inspect:
  
  1. Whether the UPS, LEDs, and alarm function are operating normally.
  2. Whether battery voltage is normal. If battery voltage is too high or too low, find the root cause.

10.2 Batteries

The N series UPS uses sealed lead-acid batteries. Though the typical battery life cycle is 3~5 years, the battery life depends on the temperature, the usage, and the charging/discharging frequency. High temperature environments and high charging/discharging frequency will quickly shorten the battery life. The UPS does not require maintenance by the user; however, the batteries should be checked periodically. Please follow the suggestions below to ensure a normal battery lifetime and sufficient back-up time.

- Keep the usage temperature at 20°C ~25°C.

- Idle batteries must be fully recharged every three months if the UPS needs to be stored for an extended period of time. Please fully charge the batteries (internal and external) until the Battery Level Bar Graph shown on the UPS’s LCD is fully on.

- A loss of battery charge capacity may occur during shipping and storage. Before 1st use of the UPS, please fully charge the batteries (internal and external).

NOTE: If the UPS’s internal batteries need to be replaced, please contact qualified service personnel. During battery replacement, the loads attached to the UPS will not be protected if input power fails.
10.3 Fan

Higher temperatures shorten fan life. When the UPS is running, please check if each fan works normally and make sure if the ventilation air can move freely around and through the UPS. If not, contact service personnel.

NOTE:

Please ask your local dealer or customer service for more maintenance information. Do not perform maintenance if you are not trained for it.
## Appendix 1: Technical Specifications

### Waveform
- Pure Sine Wave

### Input
- **Nominal Voltage**: 220/230/240 Vac
- **Voltage Range**: 175 ~ 280 Vac (100% load); 80 ~ 175 Vac (50% ~ 100% load)
- **Frequency**: 50/60 Hz ± 10 Hz
- **Power Factor**: > 0.99 (full load)
- **iTHD**: < 3%

### Output
- **Power Factor**: 0.9 (Standard Model); 0.8 (Long Backup Model)
- **Voltage**: 220/230/240 Vac
- **Voltage Regulation**: ± 2% (linear load)
- **Frequency**: 50/60 Hz ± 0.05 Hz
- **vTHD**: < 3% (linear load)
- **Overload Capability**: < 105%: continuous; 105% ~ 125%: 1 minute; 125% ~ 150%: 30 seconds
- **Crest Factor**: 3:1

### Connection
- India socket x 3
- India socket x 4
- India socket x 3, Terminal block x 1

### Efficiency
- **Online Mode**: 91%
- **Battery**: 72 Vdc
- **Battery Voltage**: 24 Vdc
- **Up to 93%**

Appendix 2 : Warranty

Seller warrants this product, if used in accordance with all applicable instructions, to be free from original defects in material and workmanship within the warranty period. If the product has any failure problem within the warranty period, Seller will repair or replace the product at its sole discretion according to the failure situation.

This warranty does not apply to normal wear or to damage resulting from improper installation, operation, usage, maintenance or irresistible force (i.e. war, fire, natural disaster, etc.), and this warranty also expressly excludes all incidental and consequential damages.

Maintenance service for a fee is provided for any damage out of the warranty period. If any maintenance is required, please directly contact the supplier or Seller.

WARNING!

The individual user should take care to determine prior to use whether the environment and the load characteristic are suitable, adequate or safe for the installation and the usage of this product. The User Manual must be carefully followed. Seller makes no representation or warranty as to the suitability or fitness of this product for any specific application.
