Delta Group

Leading expert in power management and thermal management solutions

Delta Group is the world's leading provider of power management and thermal management solutions, as well as a major source for components, visual displays, industrial automation, networking products, and renewable energy solutions. Delta Group is focused on three main businesses: power electronics, energy management, and smart green life. Delta Group has sales offices worldwide and manufacturing plants in Taiwan, China, Thailand, Japan, Mexico, India, Brazil and Europe.

As a global leader in power electronics, Delta's mission is, "To provide innovative, clean and energy-efficient solutions for a better tomorrow." Delta is committed to environmental protection and has implemented green, lead-free production and recycling and waste management programs for many years.

More information about Delta Group can be found at <http://www.deltaww.com/>

World no. 1 in Switching Power Supplies, DC Brushless Fans and Telecom Power Systems

163 sales offices and **39** manufacturing facilities worldwide

5%-6% of annual sales revenues invested in R&D with over **7,000** engineers in **64** R&D centers worldwide

Awarded **7,100+** patents and received **47** internationally recognized design awards including iF, Reddot, and the Taiwan Excellence awards.

No. 1 Supplier of Merchant Power Supplies

According to the IHS report, Delta Electronics remained the largest supplier of merchant power supplies with an estimated market share of 15.5% in 2016 of a global market value that was estimated to be \$21,869 M.

The Total Merchant Power Supply Market 2016 \$M Revenue

Ranking	Company Name	Market Share
1	Delta Electronics	15.5%
2	Axxxxxn	7.5%
3	Lxxxxxx Technology	4.5 %

Delta Cast Resin Busway System

A Flexible, Safe, and Reliable Low Voltage Power Distribution Solution

The Busway BL Series from Delta are made from epoxy using vacuum casting. Superior to traditional cables or sandwich type busway solutions, Delta's Busways significantly improve the protection ratings, safety and reliability of products, are ideal for use in harsh environmental conditions, and can be extensively applied to a range of industries. Thanks to the outstanding electrical and mechanical properties of resin, these busways have reduced dimensions, a simplified structure, extended service life, and improved reusability. More importantly, Delta's Busways provide excellent energy-savings to help our customers enjoy substantial savings on their electricity bills.

Customer Value

- Flexible modular design allows easy disassembly, reconstruction, and expansion as well as high re-usability
- Excellent safety, as well as waterproof, dustproof, fireproof, shock-proof, and corrosion-proof
- Certified according to market-specific or customer-specific needs, such as by the IEC, CNS, GB, and others
- Highly compact

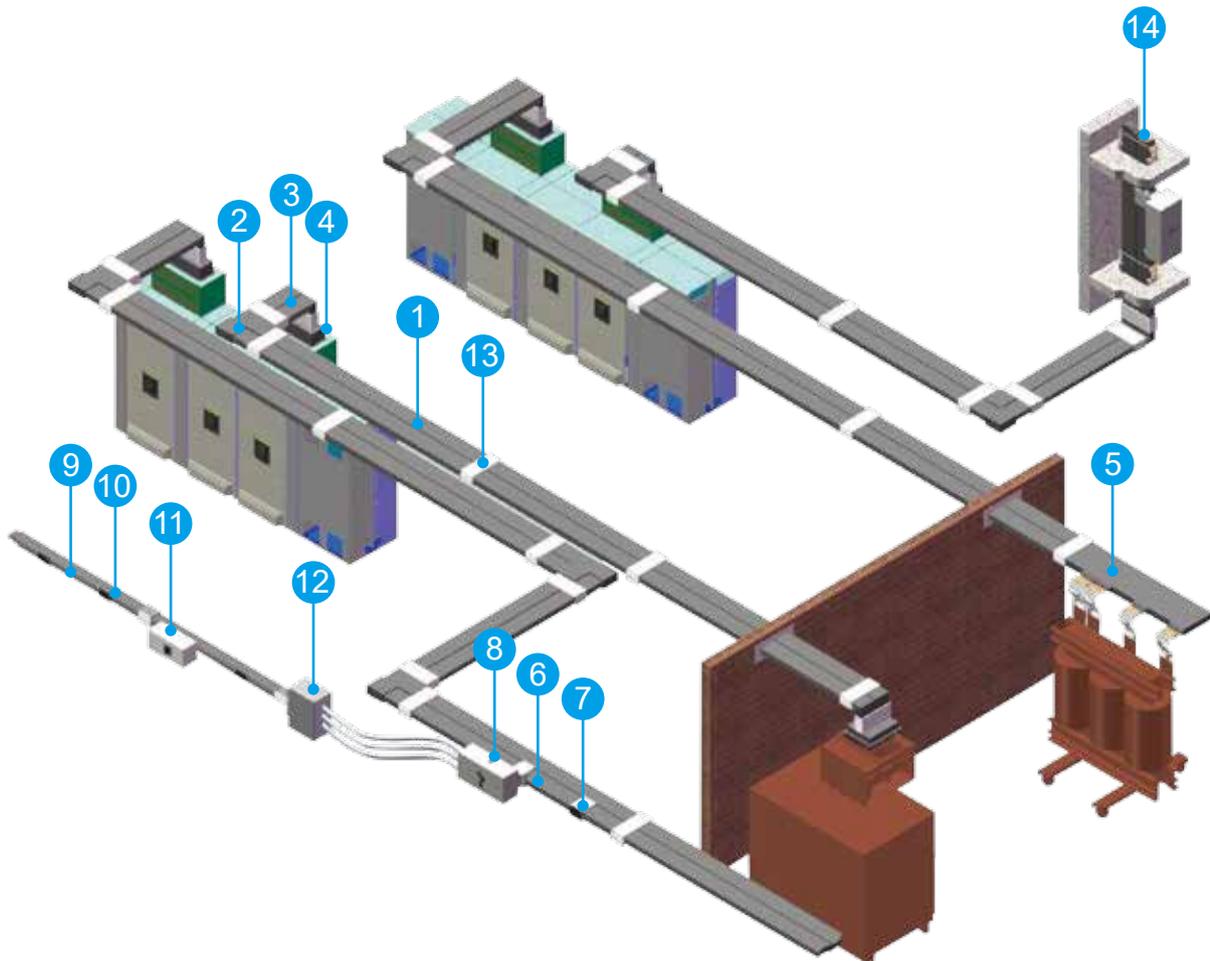

Delta's Busways vs. Traditional Cable

Delta's Busways excel over traditional cables in terms of safety, electrical properties, reliability, and scalability, making them the best choice for companies looking at optimum TCO.

	Cast Resin Busway system	Normal Cable
System flexibility	Easily detaching joints, replaceable, re-usable and highly adaptable to system design changes	Need re-wiring in case of system changes
Installation and configuration	Quick installation and configuration	Wiring over premises, costly and time-consuming
Space use efficiency	Only 30% of traditional cable wiring, effective in saving installation space	Ducts in addition to wiring, bulky
Appearance	Easy to identify and manage at a glance	Messy power wiring, complicated looks
Fire resistance	High, IEC60331	None
IP Rating	IP68	Not specified in the general technical data
Resistance to chemical and corrosion	Excellent	Poor
Instantaneous short-circuit strength	High	Low
Overload capacity (+25% 2hr)	High	Low in heat resistance (up to about 60°C), thus being dangerous when overloaded, leading to accelerated insulating materials aging and reduced service life
Insulation rating	High, resin insulation Class F (155°C).	Low

Features and Advantages

Safe, reliable, innovative, energy-saving

Key Specifications and Functions

- Copper 600A ~ 6400A,
Aluminum 400A ~ 5000A
- Rated voltage up to 1000V.
- Operating ambient temperature -20°C ~50°C, daily average up to 35°C
Altitude up to 2,000 meters.
- Model 3P3W or 3P4W, 50%G or 100%G.
- IP68 at busway feeder section, IP54 at plug-in section
- Modular design, easy disassembling and reassembling, and highly expandable
- Integrated cast resin block, with detachable bridge-type joints .
- Easy installation, effective foolproof design to prevent installation errors
- Design and Standards IEC60439-2, IEC61439, IEC60529, IEC60331, IEC60332
JIS C8364, JIS A1304, JIS H3140
GB7251.1,GB7251.2, ANSI/UL857,NEMA BU-1

Innovative Energy-saving Materials

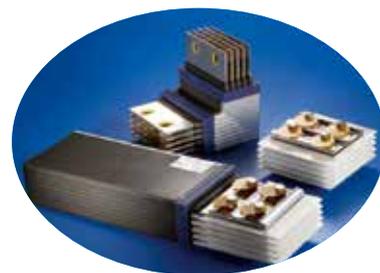

Normal busways have high power-consuming resistors in conductors, leading to expensive electricity bills. Delta's Busway uses state-of-the-art technology to not only cut electricity costs, but also effectively reduce electromagnetic interference, preventing damage to precision equipment.

- **CoAlly Technology:** Conductors are set to the optimum low-resistance state to reduce energy consumption as well as carbon footprints, while contributing to environmental protection and low power costs.
- **SiShield Technology:** With a low-impedance electrolytic copper plate, the conductor has optimum low resistance, effectively reducing loss and voltage drops. In addition, the internally coated composite significantly mitigates electromagnetic interference to protect precision equipment.

Flexible and Cost-saving

- Delta's Cast Resin Busway system is only 60% of the size of traditional sandwich busways, and 30% of the size of traditional electrical cable wiring.
- The busway joint is constructed as moving connecting modules, easy to assemble, disassemble, expand, and reuse when changing layout.
- The plug-in unit works with MCCB from major manufacturers allowing live line operations at anytime to change loads without cutting off power and saving both time and money.
- Maintenance-free throughout its service life, reducing OPEX.

Safety

Waterproof, Dustproof

Delta's Cast Resin Busway system implements an integrated, formed design, with the conductors fully sealed in an epoxy composite during casting. Thanks to the outstanding binding and sealing properties of epoxy materials, the cast busways are highly waterproof.

Ideal for demanding weather conditions and rugged operating environments, such as:

- Outdoors, pipe, AC plant rooms, and other spaces where condensate tends to form
- Locations with many fire-fighting hoses, water piping and chemical ducts
- Resistant to salt corrosion, high humidity environment

Fire resistance: IEC60332
IEC60331 750°C 3hrs
CNS12514 840°C 30mins

Delta's busways are certified as fire resistance with industrial IEC standard, and conform to the latest fire control regulations. In case of fire, the busways can ensure a continuous emergency power supply to prevent injuries and/or facility damage, and would play an important role in electrical safety.

Shock-proof: 0.8g

Shock-proof rating $>0.4g$ = Magnitude 7.

Shock-proof tests have been performed with simulated real-life building construction, including steel structures, horizontal busways, vertical busways, busway elbows, plug-in units, hangers, spring hangers and more, to ensure all components are resistant to shock.

Explosion-proof: Exm II CNS3376/IEC60079

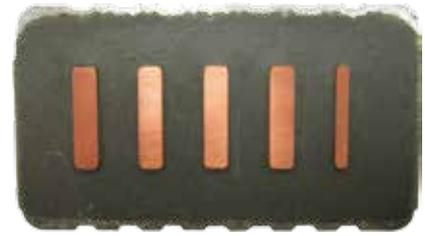

Ideal for use in a demanding environments with a risk of explosion, such as compressed natural gas filling stations, oil refineries, offshore platforms, wind farms, tunnels, mines, and others

Impact-proof: IK10

Busways

Conductor Materials

Copper and aluminum conductors are available. Copper conductors have electric conductivity of higher than 99.9%, while aluminum conductors have electric conductivity of higher than 56%. For optimum electric conductivity and contact reliability, both the copper and aluminum conductors are plated entirely with tin.

Resin Materials

For the best possible electrical, mechanical, waterproof, fireproof and self-extinguishing properties, the resin materials and their whole set of formulas are sourced from the most experienced and renowned manufacturers. The insulation rating is Class F, with a temperature limit up to 155°C. The resin is made with a high proportion of inorganic materials, such as natural sands transformed and cured into ceramic materials, thus possessing excellent insulating capabilities, high mechanical strength and outstanding fireproof properties.

Busway Structure

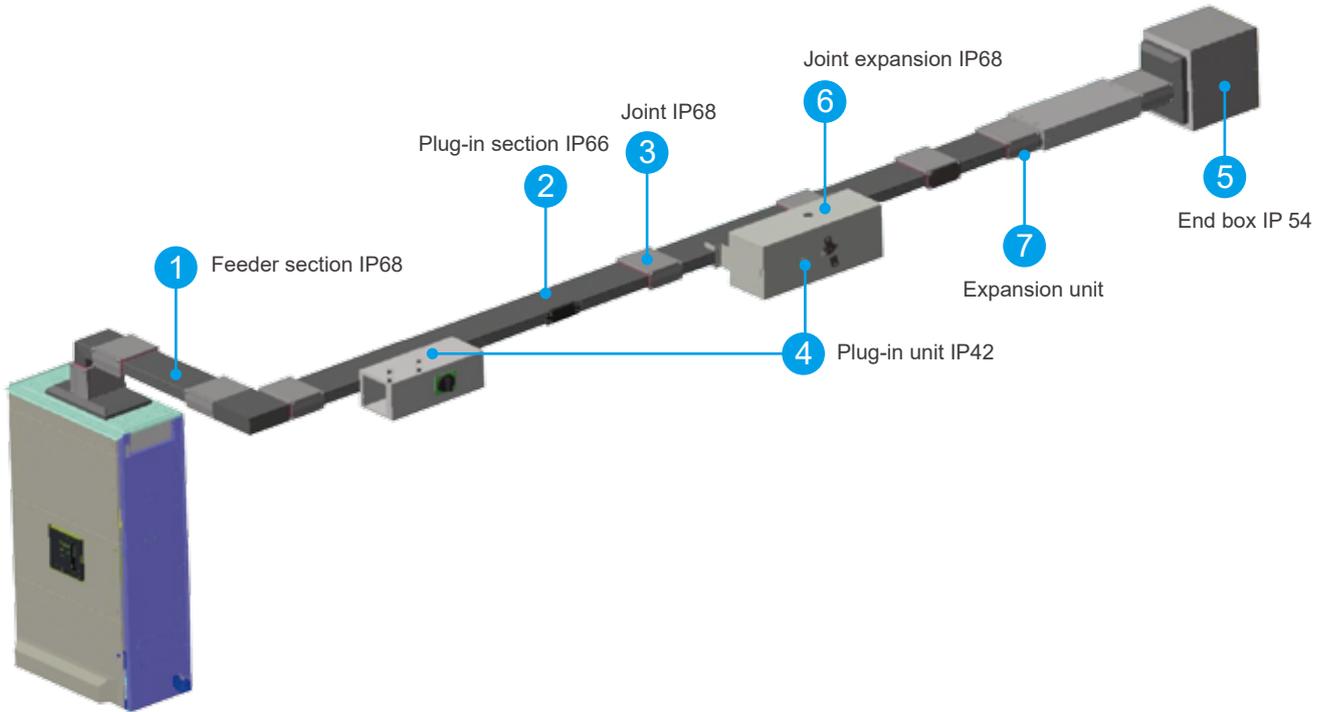

Delta's Cast Resin Busways feature an integrated, formed design, with the conductors fully sealed in an epoxy composite during casting, with highlights that include:

- Waterproof
- Epoxy made with a high proportion of inorganic materials such as natural sand that possess excellent insulating capability, high mechanical strength and excellent fireproof properties
- Plug-in unit works with MCCB from major manufacturers allowing live line operations anytime to change loads, without cutting off power to save both time and money
- Maintenance-free throughout its service life, saving on operating costs

Busway IP rating

Conforming to IEC60529, CNS14165 standards, higher rating is available under demand.

Ingress Protection rating

IP X X

Code Digit	1 st Code Digit	2 nd Code Digit
	Protected against contact with dangerous parts and foreign objects	Protected against water
0	No particular protection	No particular protection
1	I. Protecting back of the hand from getting in contact with dangerous parts II. Protecting against solid objects greater than 50mm in diameter	Protecting against vertically falling water drops
2	I. Protected against finger contact with dangerous parts II. Protecting against solid objects greater than 12.5mm in diameter	Protecting against vertically falling water drops when enclosure is tilted up to 15°
3	I. Protecting against test stick greater than 2.5mm in diameter from getting in contact with dangerous parts II. Preventing contact with foreign objects greater than 2.5mm in diameter	Protecting against water sprayed at an angle of up to 60° degrees on either side of the enclosure
4	I. Protecting against test stick greater than 1.0mm in diameter from getting in contact with dangerous parts II. Protecting against solid objects greater than 1.0mm in diameter	Protecting against water splashed against enclosure from any direction
5	Dust protected, dust not allowed to interfere with safety of the product	Protecting against water splashed against enclosure from any direction for continuous 3 minutes
6	Dustproof, no ingress of dust	Protecting against water injected against enclosure from any direction for continuous 3 minutes
7		Protecting against water when enclosure is immersed in water with the lowest point of the enclosure 1 m below the water surface , for 30 minutes
8		Protecting against water when enclosure is immersed in water with depth and duration expected to be greater than requirements for Class 7

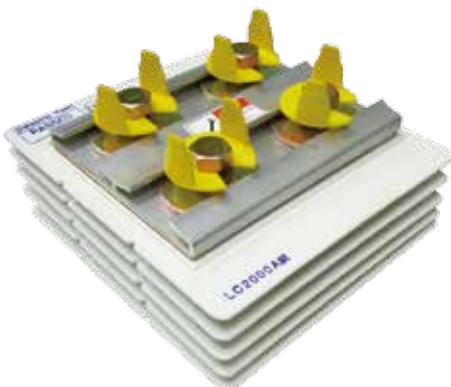

Joint

- Connection between busways is achieved by linking conductors of two busways with a movable joint. With the easily detachable joint design, replacing busways when changing power system design or adding loops, can be done in a short time, minimizing downtime.

- With the double-bolt design, stress distribution over the copper plate contact surfaces at the joint is more extensive and uniform, ensuring more reliable binding for the two busways. This promises reliability even after long-term stress fluctuation due to thermal expansion.

- The busway uses a 4-piece movable packing at the joint. After the screws at the joint are screwed to the end with a required torque, and the indication tag falls, the cap is forced onto the busways following the sealing and screwing process. The solid silicone packing wrapping the busway joint and the cap will seal any seam to ensure IP68 waterproof reliability at the joint.
- The joint is designed with foolproof functions that only allow fixed-torque screws to be set when busways are correctly positioned. Not until the fixed-torque screws are screwed to the end and have the head falling, can the sealing plate be installed. This ensures every installation step of the busway joint is done properly.

Plug-in unit

- With this plug-in unit design, when users want to add equipment or adjust power load, what they need to do is to get parts meeting the specifications of the desired plug-in unit specifications and mount the plug-in unit to the proper and closest busway slot to guide out power, without cutting off the busway. This allows for quick and easy installation, and in turn great flexibility and convenience.
- Plug-in unit is provided in two versions, both allowing live line plug/unplug operations:
 - Plug-in type capacity: Up to 630A, with conductive clip design, suitable for light load systems.
 - Bolt-on type capacity: Up to 2000A, with a bolt bridge design, suitable for heavy load systems.
Bolt packing ensures great reliability.
- The plug-in section busway has a standard length of 4.2m, with up to 5 reserved input ports. The number and location of input ports may be customized to customers' needs, thereby saving costs and preventing unnecessary waste.
- The plug-in units are able to be customized with MCCB from any leading manufacturer and is highly adaptable to customers' practical needs.
- The plug-in unit may be equipped with a monitoring module, allowing power information to be read on board or otherwise displayed, or transmitted to the monitoring system through RS485.

Applications

With the rapid growth of global IT industry, factories are built to increasingly large scales. This adds to the demand for quality power supply, safe power transfer and efficient systems, as well as greater expandability. As busway development has reached higher levels of reliability, safety and flexibility due to fast delivery and flexible engineering changes, busways are now used extensively in a variety of industries.

In addition to power transmission/distribution, Delta's Busways also feature high protection ratings and are ideal for harsh environmental conditions and mission critical applications required high reliability and safety.

Voltage drop $\Delta U = \sqrt{3} \times I \times (R85 \cos\phi + X50/60 \sin\phi)$ (V/m)

I : loading current $\cos\phi$: power factor $\sin\phi = (1 - \cos\phi^2)^{1/2}$

Spring hanger

- ◆ Where busways have to pass floor openings, spring hangers are required for sufficient support
- ◆ Spring hanger load limit: 600kg
- ◆ Spring hangers require no adjustment, and can evenly support busway weight in all floors and compensate displacement caused by thermal expansion
